

SEO Audit Report

Site: <https://www.smartplatforms.co.uk/>

Audit date: 2026-05-13

Pages sampled: 10 (homepage + 9 key linked pages)

Method: direct HTTP fetch + static analysis of HTML, headers, robots.txt, sitemap.xml. This is a heuristic on-page review and does not include rendered-JS analysis, Core Web Vitals field data, backlink profile or rank tracking.

Findings summary

Severity	Count
Critical	2
High	4
Medium	5
Low	4

Executive summary

- **The homepage has no <h1>** — the single most impactful fix on this audit.
- **Two key URLs 301-redirect to different content:** the flagship *Self-Drive* category URL now resolves to the *About* page, and the S33J product URL has been renamed without sitemap sync.
- Several pages declare **two H1 tags** (Contact, Operated, Privacy) and the site-wide viewport **disables zoom** (WCAG fail).
- Schema is limited to WebPage / WebSite / BreadcrumbList — add **Organization / LocalBusiness** on the homepage and consider **Service / Product** on platform pages.
- Social-sharing meta is incomplete: **no og:image on the homepage**, and Twitter Cards lack title / description / image.
- Foundational SEO is in good shape: HTTPS + HSTS, canonical tags everywhere, indexable robots meta, Yoast sitemap index with 5 sub-sitemaps, en-GB lang attribute.

Detailed findings

1. Homepage has no <h1> heading

[Critical] The most important page on the site has zero H1 tags. The H1 is a top-ranking factor for topical relevance and is required for accessibility (screen readers). Add a single, keyword-focused H1 (e.g. "Self-Drive & Operated Cherry Picker Hire Across the UK").

Affected: /

2. Flagship category URL redirects to About

[Critical] `/self-drive-truck-mounted-powered-access-platform-hire/` resolves to the About page (canonical = `/about-us/`). This URL — heavily used as a parent path for `/contact-.../`, `/vacancies-.../`, `/gallery/`, `/smart-platform-rental-customer-reviews/` etc. in the sitemap — no longer hosts the self-drive landing content. Either restore a dedicated self-drive category page or update internal navigation and child URLs so they don't sit under a redirected parent.

Affected: `/self-drive-truck-mounted-powered-access-platform-hire/`

3. Product URL redirects to different slug

[High] `https://www.smartplatforms.co.uk/s33j-truck-mounted-cherry-picker/` resolves with canonical `https://www.smartplatforms.co.uk/operated-hire-s33j/`. Both URLs likely appear in internal links, the XML sitemap, and inbound backlinks. Audit internal links to update to the new slug, and 301 redirects should remain in place to preserve link equity. Two URLs for the same product is also a sign of slug rename without sitemap sync — the sitemap still lists the old URL.

Affected: `https://www.smartplatforms.co.uk/s33j-truck-mounted-cherry-picker/`

4. Multiple H1 headings on the same page

[High] Each page should have exactly one H1. Multiple H1s dilute keyword relevance and confuse assistive tech. Affected pages:

- `https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/contact-truck-mounted-powered-access-hire/` — 2 H1s: Contact us, Contact Smart Platforms
- `https://www.smartplatforms.co.uk/operated-truck-mounted-cherry-picker-rental/` — 2 H1s: Operated, Operated Cherry Picker Hire
- `https://www.smartplatforms.co.uk/privacy-policy/` — 2 H1s: Privacy Policy Overview, Cookie Policy

Affected: `https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/contact-truck-mounted-powered-access-hire/`,
`https://www.smartplatforms.co.uk/operated-truck-mounted-cherry-picker-rental/`,
`https://www.smartplatforms.co.uk/privacy-policy/`

5. Viewport prevents pinch-zoom (accessibility / Core Web Vitals)

[High] All audited pages declare `width=device-width`, `initial-scale=1`, `maximum-scale=1`, `user-scalable=0`. Disabling user zoom is a WCAG 2.1 failure (1.4.4 Resize Text) and is flagged by Lighthouse SEO/accessibility. Use `width=device-width`, `initial-scale=1` only.

Affected: site-wide

6. Missing Organization / LocalBusiness structured data

[High] Only `WebPage`, `WebSite` and `BreadcrumbList` schema were detected. For a UK plant-hire company with depots, add **Organization** (or **LocalBusiness**) JSON-LD on the homepage including name, logo, url, sameAs (social profiles), address, telephone, openingHours, and areaServed. Consider **Product** or **Service** schema on each platform/model page.

Affected: site-wide

7. Homepage missing og:image

[Medium] The homepage has no og:image meta tag, so links shared to Facebook, LinkedIn, WhatsApp etc. fall back to a randomly chosen image (or none). Add a 1200×630 branded share image and reference it via og:image plus og:image:width / og:image:height.

Affected: /

8. Twitter Card meta is minimal

[Medium] Pages declare twitter:card and twitter:site but no twitter:title, twitter:description or twitter:image. Falling back to OG works on Twitter/X today but is fragile and breaks rich-image previews on other clients. Add explicit Twitter tags and use summary_large_image where you have a 1200×630 share image.

Affected: site-wide

9. Images missing alt attributes

[Medium] Images without alt text fail WCAG 1.1.1 and hide content from search engines. Counts (missing / total):

- <https://www.smartplatforms.co.uk/s33j-truck-mounted-cherry-picker/> — 7/14 missing alt
- <https://www.smartplatforms.co.uk/> — 6/59 missing alt
- <https://www.smartplatforms.co.uk/about-us/> — 6/12 missing alt
- <https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/contact-truck-mounted-powered-access-hire/> — 6/12 missing alt
- <https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/> — 6/12 missing alt
- <https://www.smartplatforms.co.uk/operated-truck-mounted-cherry-picker-rental/> — 6/12 missing alt
- <https://www.smartplatforms.co.uk/hybrid-truck-mount-hire/> — 6/22 missing alt
- <https://www.smartplatforms.co.uk/ipaf-pasma-training/> — 6/13 missing alt
- <https://www.smartplatforms.co.uk/rates-powered-access-has-never-been-so-affordable/> — 3/12 missing alt
- <https://www.smartplatforms.co.uk/privacy-policy/> — 3/9 missing alt

Affected: <https://www.smartplatforms.co.uk/s33j-truck-mounted-cherry-picker/>, <https://www.smartplatforms.co.uk/>, <https://www.smartplatforms.co.uk/about-us/>, <https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/contact-truck-mounted-powered-access-hire/>, <https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/>, <https://www.smartplatforms.co.uk/operated-truck-mounted-cherry-picker-rental/>, <https://www.smartplatforms.co.uk/hybrid-truck-mount-hire/>, <https://www.smartplatforms.co.uk/ipaf-pasma-training/> (+2 more)

10. Aggressive HTML cache lifetime (30 days)

[Medium] HTML pages return Cache-Control: public, max-age=2592000. A 30-day public cache for HTML means content updates (pricing on the rates page, vacancies, news posts) can persist stale in CDNs and intermediary proxies for a month. Recommend short HTML TTLs (e.g. public, max-age=300, stale-while-revalidate=3600) and keep long TTLs for hashed static assets only.

Affected: site-wide

11. XML sitemap likely lists redirected URLs

[Medium] The page sitemap still lists /s33j-truck-mounted-cherry-picker/ (which 301s to /operated-hire-s33j/) and /self-drive-truck-mounted-powered-access-platform-hire/ (which 301s to /about-us/). Sitemaps should contain canonical 200-OK URLs only. Re-generate via Yoast after the URL changes.

Affected: sitemap_index.xml

12. About page title omits brand name

[Low] <title>About Self Drive Truck Mounted Cherry Pickers</title> on /about-us/ omits the company name and reads like a category page. Brand suffix improves SERP click-through and disambiguation. Suggest: *About Smart Platforms — Truck-Mounted Cherry Picker Hire*.

Affected: /about-us/

13. Contact page title doesn't include "Contact"

[Low] <title>Truck Mounted Powered Access Hire | Smart Platform Rental</title> on the contact page reads like a category page. Searchers looking for "contact smart platforms" benefit from the word "Contact" in the title.

Affected: <https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/contact-truck-mounted-powered-access-hire/>

14. Contact lives under a (now-redirected) parent path

[Low] Contact is served at /self-drive-truck-mounted-powered-access-platform-hire/contact-.../. With the parent now redirecting to /about-us/, contact is effectively orphaned by URL structure. Move to a flat /contact/ (with 301 from the current URL) for clarity, click-through and link-equity.

Affected: <https://www.smartplatforms.co.uk/self-drive-truck-mounted-powered-access-platform-hire/contact-truck-mounted-powered-access-hire/>

15. Very high internal link counts per page

[Low] Pages average ~198 internal links, with the homepage at 230. Google has long since dropped the hard "100 link" limit, but >200 links per page dilutes PageRank flow and signals an unfocused information architecture (likely an oversized mega-footer or sidebar repeated on every page). Audit the footer/sidebar — keep a tight top-nav + a single "All services" footer column.

Affected: site-wide

Per-page summary

Word count / bytes	2518 words · 500,749 bytes

Recommended action plan

Week 1 (quick wins)

- Add a single keyword-focused H1 to the homepage.
- Remove maximum-scale=1, user-scalable=0 from the viewport meta site-wide.
- Add og:image (1200×630) on the homepage and add Twitter summary_large_image tags.
- Reduce HTML Cache-Control max-age from 30 days to ~5 min with stale-while-revalidate.
- Add alt text to images flagged in the per-page section.

Week 2-3 (structure)

- Decide on the fate of /self-drive-truck-mounted-powered-access-platform-hire/: either restore it as the self-drive category landing page, or migrate child URLs (/contact-.../, /gallery/, /vacancies-.../) out from under it. Then update internal links + sitemap.
- Move Contact to /contact/ with a 301 from the current URL.
- Reconcile /s33j-truck-mounted-cherry-picker/ vs /operated-hire-s33j/: pick one, update internal links and sitemap, keep the 301 in place.
- Audit pages with two H1s and demote the second to an H2.

Month 2 (schema & depth)

- Add **Organization** (or **LocalBusiness**) JSON-LD on the homepage with name, logo, telephone, address, openingHours, areaServed, sameAs.
- Add **Service** or **Product** JSON-LD on each platform / model page.
- Trim site-wide internal link count — mega-footers above ~200 links per page dilute PageRank flow.
- Run a full crawl (Screaming Frog or Sitebulb) to find every redirect chain and the inbound internal links that still point at old URLs.

Methodology & limitations

This audit was generated by directly fetching HTML from the live site over HTTP and parsing it with BeautifulSoup. It evaluates static on-page signals only: title and meta description, headings, canonical tags, robots directives, Open Graph / Twitter / JSON-LD structured data, image alt attributes, internal vs external link counts, mixed content, viewport, lang, cache headers, robots.txt and sitemap presence. It does **not** measure: rendered DOM after JavaScript execution, Core Web Vitals (LCP/INP/CLS) field data, PageSpeed performance scores, backlink profile, keyword rank tracking, log-file crawl behaviour, or competitive analysis. Recommendations are informed heuristics — validate impact with Search Console and analytics before any large URL change.
